

MONOLINE System

EN 795/C, CEN/TS 16415

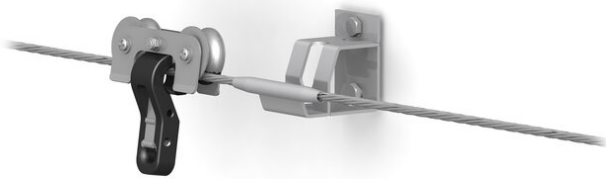

The MONOLINE system is compliant with EN 795:2012 and CEN/TS 16415:2013 standards. It constitutes a class C anchoring device for individual fall protection equipment. The concept of the MONOLINE system is based on the use of a carriage, which is a mobile anchoring point for an individual fall arrest system, which works with a single steel line guide. This solution provides the user with high comfort of horizontal motion due to the easy movement of the carriage along the guide, comparable to rail systems. At the same time, it allows to maintain the low investment costs characteristic of line systems.

Essential features of the MONOLINE system:

- Modular design and small number of components
- Quick assembly in various configurations
- Possibility of simultaneous use by 3 people
